and the Board of Selectmen  
Town of Middleboro  
20 Centre Street  
Middleboro, MA 02346

RE: My Client: Nutel Communications, Inc. – Stan Webb, President  
Application for Amusement License

Dear Ms. Stewart, Chairperson & Members of the Middleboro Board of Selectmen:

I am writing you in your capacity as the licensing authority for the Town of Middleboro. I represent Nutel Communications of Dartmouth, Massachusetts, and its principal, Stan Webb.

My client provides local businesses with a Nutel Bundled Kiosk, which is a DataPin vending machine product with customer loyalty-based amusement redemption skill games. These machines are currently licensed and in use in a number of nearby communities, including: Fall River, New Bedford, Acushnet, Wareham and Taunton, to name a few, and we were recently approved in the neighboring Town of Raynham at its regularly scheduled meeting of the Board of Selectmen, acting as licensing authority held on July 12, 2016.

I am writing to ask for the opportunity to meet with you and your board at your convenience in order to explain and demonstrate as well as answer any questions that the Town might have with regards to the installation, operation and functions of these kiosks and also, importantly, to give my client the opportunity to introduce himself to your Town, where he hopes to be able to expand his business as well as benefit local businesses and establishments in the Town of Middleboro.

Prior to my request for a meeting before your Board, I have taken the opportunity to speak with Town Manager, Robert Nunes, as well as John Perkins, Chief of Police, who were gracious enough to meet with myself as well as my client at the Town Offices on June 28<sup>th</sup>, so that we could explain to them and demonstrate to them our product. We would greatly appreciate the opportunity to meet before your Board at your convenience at one of its regularly scheduled meetings during the month of September so that we can provide your Board with any information that it might require in order to assist y our board with a decision to allow us to license our machines in Middleboro.

Diane Stewart, Chairperson  
and the Board of Selectmen  
August 23, 2016  
Page Two

I look forward to hearing from your office in order that we might schedule a time convenient to you. Thank you in advance for your attention and consideration to this matter.

Very truly yours,

A handwritten signature in black ink, appearing to read 'J. Fagan', written over a large, stylized, looped flourish.

**From:** Hartman, Lester  
**Sent:** Monday, August 22, 2016 4:49 PM  
**To:** Colleen Lieb  
**Cc:** Robert Buker  
**Subject:** Appearing before the Board of Selectman on Tobacco21

Dear Ms Lieb and the BOS,

I am the co-founder of the Tobacco21 - raising the sales age to 21y and I have attended over 160 BOH/BOS in the state. We have 131 towns and 58% of the Commonwealth under this regulation. I fear you may not have been fully informed of the science of why 21 y works. I can attend Monday night meeting except 9/12/16.

For example:

- 1) The rate of smoking during pregnancy is 99% higher than the State mean.
- 2) Mortality from lung cancer is 59% higher in Middleborough Massachusetts mean.  
It is in the BOS's power to change this by delaying initiation of tobacco until 21y..

Attachments:

- 1) The map of towns now at 21y.
- 2) Institute of Medicines Report on why 21 works- through taking out the 18 and 19 yo distributors in the high school.
- 3) Why retail stores only lose 2% of their total tobacco revenue.
- 4) Needham, Ma- the first place in the US to go to 21y to go to21y and had a 50% reduction in tobacco use in the high school a- a 3 fold gretaer reduction than adjacent towns. **Also not a single convenient store went out of business.**
- 5) Why 21y the military argument for doing this.

I leave you with comment by Navy Rear Admiral John Fuller in Hawaii:

"If someone is young enough to fight for their country, they should be free from addiction to a deadly drug."

Regards,

# Public Health Implications of Raising the Minimum Age of Legal Access to Tobacco Products

Over the past 50 years, tobacco control in the United States has led to an estimated 8 million fewer premature deaths. However, tobacco use continues to significantly affect public health, and more than 40 million Americans still smoke.

In 2009, the Family Smoking Prevention and Tobacco Control Act granted the U.S. Food and Drug Administration (FDA) broad authorities over tobacco products, though it prohibited FDA from establishing a nationwide minimum age of legal access—an MLA for tobacco products—above 18 years of age. It also directed FDA to convene a panel of experts to conduct a study on the public health implications of raising the minimum age to purchase tobacco products. At FDA's request, the Institute of Medicine (IOM) convened a committee in 2013 for this purpose.

In the resulting report, *Public Health Implications of Raising the Minimum Age of Legal Access to Tobacco Products*, the committee of experts reviews existing literature on tobacco use initiation, developmental biology and psychology, and tobacco policy and predicts the likely public health outcomes of raising the MLA for tobacco products to 19 years, 21 years, and 25 years. The committee also uses mathematical modeling to quantify these predictions. Of note, the report contains only conclusions regarding raising the MLA; as requested by FDA, the committee does not offer recommendations as to whether the MLA should be raised.

**...tobacco use continues to significantly affect public health, and more than 40 million Americans still smoke.**

### Lowering Initiation Rates

The initiation age of tobacco use is critical. Among adults who become daily smokers, approximately 90 percent report first use of cigarettes before reaching 19 years of age, and almost 100 percent report first use before age 26. As mentioned above, FDA cannot raise the MLA nationwide. However, states and localities can set a higher minimum age for their communities. Most states currently set the MLA at 18 years. Four states set it at 19 years, and several localities around the country have raised the minimum age to 21 years.

Based on its review of the literature, the committee concludes that overall, increasing the MLA for tobacco products will likely prevent or delay initiation of tobacco use by adolescents and young adults. The age group most impacted will be those age 15 to 17 years. The committee also concludes that the impact of raising the MLA to 21 will likely be substantially higher than raising it to 19. However, the added effect of raising the MLA from 21 to 25 will likely be considerably less.

The parts of the brain most responsible for

decision making, impulse control, sensation seeking, and susceptibility to peer pressure continue to develop and change through young adulthood, and adolescent brains are uniquely vulnerable to the effects of nicotine. In addition, the majority of underage users rely on social sources—like family and friends—to get tobacco.

Raising the MLA to 19 will therefore not have much of an effect on reducing the social sources of those in high school. Raising the MLA to 21 will mean that those who can legally obtain tobacco are less likely to be in the same social networks as high school students. In the same vein, increasing the MLA from 21 to 25 is not likely to achieve additional notable reductions in social sources for those under age 15.

### Reducing Prevalence, Decreasing Disease

Delaying initiation rates will likely decrease the prevalence of tobacco users in the U.S. population. To quantify this decrease in both prevalence of tobacco users and in related health concerns

FIGURE: Committee Estimates Regarding Effects on Initiation Rates

NOTE: This figure was created using data from Table 7-2 in the report.

**The parts of the brain most responsible for decision making, impulse control, sensation seeking, and susceptibility to peer pressure continue to develop and change through young adulthood, and adolescent brains are uniquely vulnerable to the effects of nicotine and nicotine addiction.**

that could be a result of raising the MLA, the committee commissioned the use of two established and complementary tobacco simulation models, SimSmoke and the Cancer Intervention and Surveillance Modeling Network smoking population model (CISNET).

In using the models, the committee employed all available evidence and expert judgment to project outcomes. The committee also had to make assumptions with important implications. The models only address cigarette smoking, but the committee expects the MLA and relative effects on initiation to apply to all tobacco products. In addition, the models project the effects of raising the MLA on the United States as a whole and do not take into account existing variations in tobacco use—such as by race or socioeconomic status—initiation rates, and tobacco control activities. In addition, the rapidly changing landscape of tobacco products—for example, e-cigarettes—provides unknowns and could affect the future of tobacco product use in ways that the committee was unable to anticipate due to lack of evidence.

Based on the modeling and backed up by the literature review, the committee concludes that raising the minimum age of legal access to tobacco products in the United States, particularly to ages 21 and 25, will likely lead to a substantial reduction in smoking prevalence. If the MLA were raised now, the models projected that by the time today's teenagers were adults, there would be a 3 percent decrease in prevalence of tobacco use among those adults if the MLA were raised to 19, a 12 percent decrease if raised to 21, and a 16 per-

cent decrease if raised to 25.

Given a decline in the initiation rates of tobacco use by adolescents and lower prevalence in the population, it follows that tobacco-related disease would also decrease in proportion to the reduction in tobacco use. It is generally known that smoking-related diseases like cancer and heart disease develop over decades, and therefore, it could take many years to lower rates of these diseases; however, there could be immediate decreases in other tobacco-related health effects.

The committee concludes that raising the MLA will likely immediately improve the health of adolescents and young adults by reducing the number of those with adverse physiological effects such as increased inflammation and impaired immune functioning caused by smoking, as these could potentially lead to negative health consequences, including increased hospitalizations and lessened capacity to heal wounds. Adverse maternal, fetal, and infant outcomes—including preterm births, low birth weight, and sudden infant death—will also probably decrease due to reduced tobacco exposure in mothers and infants. Raising the MLA will also lessen the population's exposure to secondhand smoke and its associated health effects, both now and in the future.

Over time, the committee concludes that raising the MLA will likely lead to substantial reductions in smoking-related mortality, though results from the models suggest that these results will not be observed for at least 30 years, assuming that the MLA increase occurs now. The CISNET model

projected that if the MLA were raised now to 21 nationwide, there would be approximately 223,000 fewer premature deaths, 50,000 fewer deaths from lung cancer, and 4.2 million fewer years of life lost for those born between 2000 and 2019.

**Conclusion**

The public health impact of raising the MLA for tobacco products depends on the degree to which local and state governments change their policies. These decisions will depend on each state's or locality's balance between personal interests and the privacy of young adults to make their own choices versus society's legitimate concerns about protecting public health.

The IOM committee makes conclusions about likely public health outcomes of raising the MLA for tobacco products. Overall, in the absence of transformative changes in the tobacco market, social norms and attitudes, or in the knowledge of patterns and causes of tobacco use, the committee is reasonably confident that raising the MLA will reduce tobacco use initiation, particularly among adolescents 15 to 17 years of age; improve the health of Americans across the lifespan; and save lives.

## Retail Impact of Raising Tobacco Sales Age to 21 Years

The majority of tobacco use emerges in individuals before they reach 21 years of age, and many adult distributors of tobacco to youths are young adults aged between 18 and 20 years. Raising the tobacco sales minimum age to 21 years across the United States would decrease tobacco retailer and industry sales by approximately 2% but could contribute to a substantial reduction in the prevalence of youths' tobacco use and dependency by limiting access. (*Am J Public Health*. 2014;104:e18–e21. doi:10.2105/AJPH.2014.302174)

Jonathan P. Winickoff, MD, MPH, Lester Hartman, MD, MPH, Minghua L. Chen, MD, MPH, Mark Gottlieb, JD, Emara Nabi-Burza, MBBS, MS, and Joseph R. DiFranza, MD

**RECENT RESEARCH HAS HIGHLIGHTED** the susceptibility of the young adult brain to rapid nicotine addiction.<sup>1,2</sup> While individuals are still experimenting with tobacco use and before they are aware of their own level of addiction, they first want, then crave, then need cigarettes, at which point they are unable to quit.<sup>1</sup> Individuals who begin smoking at a young age are more likely to become addicted, progress to daily smoking, become heavier tobacco users as adults, and have difficulty quitting.<sup>3,4</sup> The US Surgeon General has expressed concern about the potential long-term cognitive effects of exposure to nicotine during brain development with the potential for lasting adverse consequences.<sup>5</sup>

For many years, public health strategies focused on preventing the onset of nicotine addiction by relying on the strict enforcement of laws that prevent the sale of tobacco to minors younger than 18 years. Indeed, successful efforts to limit tobacco access of minors by disrupting the sale of tobacco to minors have made an important contribution toward reductions in the prevalence of tobacco use among minors.<sup>6</sup>

A factor that might limit the impact of preventing the sale of tobacco to minors is the fact that, in most communities, 18- to 20-year-olds who can legally purchase cigarettes provide them to younger friends and family members.<sup>7</sup> The majority (59%) of 18- and 19-year-olds have been asked by someone younger than 18 years to buy cigarettes for them.<sup>8</sup> Also, high-school students are less likely to have 21-year-old

adults than 18- to 20-year-old adults in their social circles, suggesting reduced opportunities to access tobacco from older buyers.<sup>9</sup> Inhibiting this well-established distribution cycle provides one rationale for increasing the legal age for tobacco sales to 21 years.

Another rationale stems from the 2012 Surgeon General's report finding that almost 90% of smokers in the United States began smoking before the age of 21 years.<sup>4,10</sup> The report concludes that if young people can remain free of tobacco, most will never start to smoke. Currently, people who reach the age of 21 years as a nonsmoker have a minimal chance of ever becoming a smoker. For these reasons, there is interest in extending the benefits of restricting tobacco sales to individuals younger than 21 years.

### RECENT CHANGES IN US TOBACCO SALES AGE LAWS

In consideration of the potential beneficial public health impact of raising the tobacco sales age to 21 years, some US cities and counties (New York City; Suffolk County, NY; Hawaii County, HI; and Needham, Arlington, Sharon, Canton, Ashland, Wellesley, Dedham, Dover, Norwood, Scituate, West Boylston, Hudson, Winchester, Wakefield, Reading, and Melrose counties, MA) have already approved legislation for raising the age to 21 years, and other cities, counties, and states are making legislative or regulatory efforts to approve similar proposals. With a single exception, all of these measures were adopted in either

2013 or 2014. Clearly, the idea of increasing the minimum tobacco sales age to 21 years has momentum.<sup>11</sup>

The tobacco industry and retailers argue that raising the sales age to 21 years will significantly hurt businesses that depend on tobacco sales.<sup>12,13</sup> We sought to determine the proportion of the current legal tobacco market ( $\geq 18$  years) that is consumed by 18- to 20-year-old smokers to determine the potential impact to retailers if the tobacco sales age of 21 years was universally implemented and enforced.

We obtained self-reported data regarding cigarette consumption by age from the 2011 National Health Interview Survey (NHIS). The survey includes both citizen and noncitizen noninstitutionalized civilian American households. We analyzed data from 33 014 respondents who were asked questions about smoking in the NHIS Sample Core Adult Health Behavior Section ( $\geq 18$  years) database. Current smokers were identified as having smoked at least 100 cigarettes in their lifetime and still smoking when surveyed. We sought to calculate the volume of cigarette products consumed by individuals, between the ages of 18 and 20 years. Because the data were derived from self-reported cigarettes smoked, it accounts for any tobacco used to "roll your own," as well as small cigars that are functionally identical to cigarettes. Tobacco consumed by 15- to 17-year-old smokers was not included as sales to this population are already illegal under federal law.

We used SAS version 9.3 (SAS Institute, Cary, NC) to conduct data analysis. We calculated mean average daily and annual cigarette consumption for current smokers aged 18 to 20 years and those aged 21 years or older to determine the proportion of total cigarette consumption that is attributable to 18- to 20-year-old smokers.

In our sample of 33 014 (Table 1), there were 6138 (18.6%) current smokers, 188 (15.2% smoking prevalence) in the 18- to 20-year-old group and 5950 (18.7% smoking prevalence) in the group aged 21 years and older. The 18- to 20-year-old group of current smokers were 49% female, 77% White, 18% Hispanic, and 16% Black, and the current smokers aged 21 years or older were 48% female, 77% White, 12% Hispanic, and 17% Black.

About 37% of 18- to 20-year-old respondents lived with 3 or more household members compared with 4% of those aged 21 years or older ( $P < .001$ ).

Table 2 demonstrates the lower daily cigarette consumption of those aged 18 to 20 years versus those aged 21 years or older (8.6 per day vs 12.5 per day;  $P < .001$ ). We also found out that 18- to 20-year-old smokers make up 3.06% of the total adult smoking population but account for just 2.12% of cigarette consumption.

### EFFECTS ON TOBACCO INDUSTRY AND RETAILERS

If one assumes that the number of cigarettes smoked by 18- to 20-year-old smokers corresponds to the number of cigarettes sold to

them or to others on their behalf, the maximum immediate loss of sales would be just 2% of the total cigarette sales in the United States. If we assume that this intervention would have a long-term impact on the prevalence of smoking by adolescents and young adults, the gradual aging of this low-tobacco-use cohort would give plenty of time for small businesses to adjust to changing market conditions were the minimum legal tobacco sales age raised to 21 years.

Similar objections were raised decades ago when the national minimum drinking age was proposed to be raised to 21 years. After the law was passed and implemented by most states in the 1980s, a reduction in drinking, problematic drinking, drinking and driving, and alcohol-related crashes among youths was seen.<sup>14</sup>

The alcohol industry still survived by adapting to the changing market despite the loss of sales to those younger than 21 years. Furthermore, retailers are already required under federal rules to check the ID of anyone who appears to be younger than 27 years seeking to purchase tobacco,<sup>15</sup> so an age-21 requirement would place no additional compliance burdens on their staff. The fact that more than one third of the 18- to 20-year-old young adults live with 3 or more individuals highlights the additional potential for blocking the transfer of tobacco use behavior to other household members.

### OVERALL IMPLICATIONS

The evolving neuroscience of the young adult brain demonstrates

TABLE 1—Basic Characteristics of Respondents and Current Smokers: 2011 National Health Interview Survey, United States

Current smoker	188 (15.2)		5950 (18.7)	

Note. The sample size was n = 33 014 participants.

**TABLE 2—Average Cigarette Consumption by Age for Current Smokers and Percentage of 18- to 20-Year-Old Smokers as a Percentage of Total Adult Cigarette Consumption: 2011 National Health Interview Survey, United States**

Variable	All Participants Aged ≥ 18 Years, Mean of No.	Participants Aged 18–20 Years	Participants Aged ≥ 21 Years	Participants Aged 18–20 Years, % of Total Sample
Average daily cigarette consumption per smoker	12.38	8.57	12.50	
Average annual cigarette consumption per smoker	4520.28	3131.62	4564.16	
No. of current smokers	6138	188		3.06
Total no. of cigarettes smoked in 2011	27 745 475	588 745		2.12

Note. Current smokers included both daily and nondaily users, and lifetime consumption of greater than 100 cigarettes. The same size was n = 33 014 participants, including n = 6138 current smokers; 18.6% of the population reported lifetime use of greater than 100 cigarettes and some level of current use.

a special susceptibility to even experimental tobacco use.<sup>1</sup> Low minimum sales age laws exploit that susceptibility to addict youths to cigarettes for life, with relatively few cigarettes. Meanwhile, raising the sales age would appear likely to have a significant effect on current tobacco use rates among youths, decreasing the chances of a person ever becoming tobacco dependent. By some estimates, raising the tobacco sales age to 21 years would reduce tobacco use prevalence by 55% for 15- to 17-year-old adolescents within 7 years.<sup>16</sup>

In 2005, Needham, Massachusetts, was the first town in the country to implement the law to raise the tobacco sales age to 21 years. Following the implementation of the law, the Youth Risk Behavior Surveillance System and Metro West Health Foundations' Adolescent Health survey data showed a 47% reduction in Needham high-school smoking rate in the 4 years (2006–2010) after the legislation was implemented.<sup>17</sup> Of note, no tobacco retailers have gone out of business in Needham since implementation.

## LIMITATIONS

Although we have not specifically accounted for other non-cigarette tobacco or smokeless

tobacco sales, we have accounted for any tobacco that is smoked and self-reported as a cigarette, the form that has the highest disease burden. According to the Centers for Disease Control and Prevention's *Morbidity and Mortality Weekly Report*, about 90% of all combustible tobacco consumption is cigarettes among adult smokers.<sup>18</sup> In addition, 2012 National Youth Tobacco Survey data indicate that the majority of tobacco consumption remains cigarettes, and high-school students in the young adult age range (>17 years) are 3 times more likely to smoke cigarettes daily than use any other combination of cigars, bidis, and cigarillos on a daily basis.

Adult versus youth smokeless tobacco use rates and amount consumed are much harder to quantify and we intentionally excluded these to avoid reporting bias. In addition, the US retail cigarette market is more than 30 times greater than the smokeless tobacco market, making any adult versus youth consumption discrepancy unlikely to change our overall estimate of the tobacco sales impact.<sup>19</sup>

## CONCLUSIONS

Overall, a small percentage of total tobacco sales (2%) is attributed to those younger than

21 years, yet most lifetime tobacco users start smoking before the age of 21 years. Early tobacco initiation during young adulthood comes with a high probability of addiction, progression to daily smoking, and heavier tobacco use in adulthood, and has long-term harmful health consequences. Action on this critical issue of raising the minimum tobacco sales age to 21 years across the United States has excellent public health and ethical rationales, and costs almost nothing to implement through existing regulatory frameworks. ■

## Contributors

J.P. Winickoff originated and designed this study, drafted the article and revised it, and takes full responsibility for the final submission. L. Hartman, M. Gottlieb, E. Nabi-Burza, and J.R. DiFranza made substantial intellectual contributions to the conceptualization and design of the study, and to editing the article. M.L. Chen advised on and conducted data analyses, and participated in the interpretation of results. All authors approved the final article as submitted.

## Acknowledgments

This study was supported by the National Institutes of Health, National Cancer Institute grant R01-CA127127 (J.P. Winickoff) and 2R01-CA087571 (M. Gottlieb), the National Institute on Drug Abuse, and the Agency for Healthcare Research and Quality.

Note. The funders had no role in the design or conduct of the study, analysis and interpretation of the data, or preparation, review and approval of the article.

## Human Participant Protection

This study was exempt from institutional review board approval because it is a secondary data analysis of a publicly available data set.

Middleborough Conservation Commission  
20 Centre Street, 2<sup>nd</sup> floor  
Middleborough, MA 02346

Dear Commissioners,

NSTAR Electric Company d/b/a Eversource Energy (Eversource) respectfully submits this letter to provide the Conservation Commission with notification regarding the scheduled routine repair and maintenance of existing access roads. This repair will be within the limits of the existing Right-of-Way (ROW). The ROW enters into Middleborough, MA from its southern border with Rochester, MA near Meadow Street and runs northeast into Carver, MA near Main Street. (See the enclosed Project Plans).

Access roads are a critical part of Eversource's facilities as they provide safe access for the necessary equipment and personnel to be able to travel to existing electric transmission towers and lines for maintenance and repair. Well maintained access roads play an important role in Eversource's ability to restore power in a timely manner, especially during hazardous and storm conditions. In addition, well maintained access roads allow for a clearly defined pathway for Eversource's equipment to travel along the ROW.

Eversource is planning to perform this access road work in accordance with the provision of the Wetlands Protection Act (MGL 131-40) that allows for "maintaining, repairing, or replacing, but not substantially changing or enlarging an existing and lawfully located structure or facility used in the service of the public and used to provide electric...services" without filing a Notice of Intent.

Wetland scientists from Vanasse Hangen Brustlin, Inc. (VHB) have completed wetland delineation along the previously identified segments of ROW to help facilitate this work. Wetland resource area boundaries and associated buffer zones are shown on the Project Plan set attached to this letter for your review.

***Summary of Access Road Maintenance Activities***

The proposed access road maintenance work will occur along portions of existing access roads within the ROW. The attached Project Plans show the location of the existing access roads to be maintained as part of Eversource's 2016 Access Road Maintenance Program. The proposed maintenance work will primarily occur in non-jurisdictional upland areas; however work may also occur within the 100-foot Buffer Zone, Bordering Land Subject to Flooding, and/or 200-Foot Riverfront Area. These roads will be maintained to Eversource's standards as depicted on the enclosed "Typical Gravel Access Section" detail. Swamp mats will be utilized to cross vegetated wetlands as necessary to access upland locations for road work. Enclosed, please find details for typical straw wattle erosion control barriers and swamp mats to be used as Best Management Practices (BMPs). The following bullets provide an overview of the proposed maintenance.

- An erosion control barrier (straw wattle) will be installed between existing vegetated wetland areas and the maintenance work prior to any grading activities. These erosion control barriers will be removed once gravel material is placed on the road and the area is permanently stabilized.

FILE

- Existing overgrown vegetation, rocks, or obstructions on the edges of the existing access roads will be cleared to restore the road to a minimum twelve (12) feet in width (See attached specification for typical access road cross-section).
- Existing access roads will be maintained in their current location.
- Existing access road gravel material will be used as appropriate to re-grade the road cross-sectionally and longitudinally to provide a smooth suitable base.
- A top layer of processed gravel, stone or trap rock will be installed to a compacted thickness of at least three inches.
- In low areas where consistent puddling occurs within the existing roadway, a conductor pipe may be installed to allow water to equalize on either side of the road, to prevent water from running over the road causing washout. No equalizer pipes will be installed within existing vegetated wetland areas.
- In locations where unavoidable access is required through vegetated wetland, swamp mats will be temporarily installed to facilitate access only. The swamp mats will not remain in place for longer than three months.
- Upon removal of swamp mats, areas will be allowed to re-vegetate naturally. Additional restoration efforts will be implemented if necessary at the discretion of a wetland specialist.

This work is scheduled to begin at the end of July and may continue through the fall of 2016. If you have any questions or would like more information, please contact Denise Bartone at [Denise.Bartone@eversource.com](mailto:Denise.Bartone@eversource.com) or 781-441-8174. Otherwise the work will be completed as presented herein.

Very truly yours,

Denise Bartone  
Sr. Environmental Engineer

# Straw Wattle Installation Guide

1. BEGIN AT THE LOCATION WHERE THE WATTLE IS TO BE INSTALLED BY EXCAVATING A 2'-3" (67.5 CM) DEEP X 9" (22.9 CM) WIDE TRENCH ALONG THE CONTOUR OF THE SLOPE. EXCAVATED SOIL SHOULD BE PLACED UP-SLOPE FROM THE ANCHOR TRENCH.
2. PLACE THE WATTLE IN THE TRENCH SO THAT IT CONTOURS TO THE SOIL SURFACE. COMPACT SOIL FROM THE EXCAVATED TRENCH AGAINST THE WATTLE ON THE UPHILL SIDE. ADJACENT WATTLES SHOULD TIGHTLY ABUT.
3. SECURE THE WATTLE WITH 18-24" (45.7-61 CM) STAKES EVERY 3'-4" (0.9 - 1.2 M) AND WITH A STAKE ON EACH END. STAKES SHOULD BE DRIVEN THROUGH THE MIDDLE OF THE WATTLE LEAVING AT LEAST 2'-3" (67.5 CM) OF STAKE EXTENDING ABOVE THE WATTLE. STAKES SHOULD BE DRIVEN PERPENDICULAR TO SLOPE FACE.

North American Green Straw Wattles are a Best Management Practice (BMP) that offers an effective and economical alternative to silt fence and straw bales for sediment control and storm water runoff.

Guidelines are provided to assist in design, installation, and structure spacing. The guidelines may require modification due to variation in soil type, rainfall intensity or duration, and amount of runoff affecting the application site.

To maximize sediment containment with the Straw Wattle, place the initial structure at the top/crest of the slope if significant runoff is expected from above. If no runoff from above is expected, the initial Straw Wattle can be installed at the appropriate distance downhill from the top/crest of the slope. The final structure should be installed at or just beyond the bottom/ toe of the slope. Wattles should be installed perpendicular to the primary direction of overland flow.

Straw Wattles are a temporary sediment control device and are not intended to replace rolled erosion control products (RECPs) or hydraulic erosion control products (HECPs). If vegetation is desired for permanent erosion control, North American Green recommends that RECPs or HECPs be used to provide immediate erosion control and vegetation to stabilize the structure. Vegetation should be installed perpendicular to the wattle. The effectiveness of the Straw Wattle is dependent on site sediment and runoff control for these applications. Like all sediment control devices, the effectiveness of the Straw Wattle is dependent on storage capacity.

For additional installation assistance, please contact North American Green's Technical Services Department at 1-800-772-2040  
 14649 Highway 41 North, Evansville, Indiana 47725

RE: Permanent Solution Statement for  
Solar Array Construction Site, Vicinity of 19 Fairview Street  
Middleborough, MA 02346  
Release Tracking Number 4-26171

Dear Middleborough Board of Health:

The purpose of this correspondence is to inform you that a Permanent Solution Statement (PSS) for the above referenced site has been submitted to the Massachusetts Department of Environmental Protection (DEP) by Jeff Garretson, the Licensed Site Professional (LSP) for this site.

A copy of the PSS is available at the DEP Southeast Regional Office located at 20 Riverside Drive Lakeville, Massachusetts 02347 or can be downloaded from the DEP's online filing system at <http://www.mass.gov/DEP>.

Sincerely,  
For Common Sense Environmental, Inc.

**From:** OUI Notice (AGO)  
**Sent:** Wednesday, August 24, 2016 11:25 AM  
**Subject:** OUI Last Drink Data - Q2 (2016)

The Attorney General's Office, Municipal Law Unit ("MLU"), is now e-mailing to cities and towns information about establishments where defendants convicted of operating under the influence say they were served alcohol before being arrested. MLU sends this information to City and Town Clerks quarterly or as it becomes available from the Trial Court. The Clerks should forward this email to others in the municipality that may have interest in the information, such as local licensing authorities.

As you may know, General Laws Chapter 90, Section 24J, requires courts to ask defendants convicted of operating under the influence of alcohol whether they were served alcohol at any licensed establishment before the violation and the name and location of any such establishment. The Trial Court periodically provides this information to the Attorney General's Office and the Alcoholic Beverages Control Commission (ABCC). The Attorney General is making this information available to you in view of the public safety issue that operating under the influence presents. Please note that the information supplied by the Trial Court may not be complete. The Attorney General has alphabetized the available information by city or town name but does not have additional information beyond that supplied by the Trial Court.

This information does not constitute an accusation of criminal or negligent conduct by any establishment and is not meant to be a substitute for your own license monitoring and enforcement practices. The Attorney General has not conducted an independent review of the information and notes that Section 24J does not require that defendants' statements about these establishments be made under oath. The provision of this information should not be considered the rendering of legal or other professional advice. If you have any questions regarding how this information may be used, we suggest you contact the ABCC at 617-727-3040, or [abcc\\_inquiries@tre.state.ma.us](mailto:abcc_inquiries@tre.state.ma.us).

We are sending this information to what we understand to be the e-mail addresses of the City and Town Clerks who are in the best position to place the last-drink information before local licensing authorities. If you need to update your e-mail address, please send an e-mail to: [OUINotice@state.ma.us](mailto:OUINotice@state.ma.us).

**COMMONWEALTH OF MASSACHUSETTS  
DEPARTMENT OF TELECOMMUNICATIONS AND CABLE**

D.T.C. 16-2

September 6, 2016

Investigation by the Department of Telecommunications and Cable, On its Own Motion,  
Instituting A Rulemaking and Regulation Review Pursuant to G.L. c. 30A, 207 C.M.R. § 2.00,  
220 C.M.R. § 2.00, and Executive Order No. 562 To Reduce Unnecessary Regulatory Burdens

---

**NOTICE OF PUBLIC HEARING AND REQUEST FOR COMMENTS**

On September 6, 2016, the Department of Telecommunications and Cable ("D.T.C.") issued an Order Instituting a Rulemaking, pursuant to the provisions of G.L. c. 25C, G.L. c. 30A, G.L. c. 159, G.L. c. 166A, 220 C.M.R. § 2.00, 207 C.M.R. § 2.00, and Executive Order No. 562, to reduce unnecessary regulatory burden and to amend or rescind D.T.C. regulations within Titles 207 and 220 of the Code of Massachusetts Regulations ("C.M.R.").

The D.T.C.'s regulations currently reside in two Titles of the C.M.R., with cable regulations located in Title 207 and telecommunications regulations located in Title 220. However, Title 220 has been assigned to the D.T.C.'s sister agency, the Department of Public Utilities ("D.P.U."). Further, certain chapters, including 220 C.M.R. §§ 1.00, 2.00, 5.00, 45.00, 26.00, 77.00, and 78.00, are presently used by both agencies and applicable to industries regulated by both agencies.<sup>1</sup> As a result, the D.T.C.'s proposed amendments largely shift D.T.C. regulations and those applicable to telecommunications into Title 207. In addition, with the exception of 220 C.M.R. § 45.00, which will continue to apply to both agencies, but will not be addressed at this hearing, the D.P.U. will independently propose to amend Title 220 to remove that Title's applicability to telecommunications common carriers.

The D.T.C. proposes to merge procedural regulations applicable to cable and telecommunications into a single chapter, 207 C.M.R. § 1.00, and similarly merge regulations involving the adoption, amendment, or repeal of regulations into 207 C.M.R. § 2.00. Other proposed changes include technical corrections, updating outdated references, and choosing not to repromulgate certain unnecessary or shared regulations. In particular, the D.T.C. proposes not to repromulgate 220 C.M.R. §§ 16.00 and 273.00 in its regulations. The D.T.C. also proposes not to repromulgate telecommunications-specific provisions contained in 220 C.M.R. §§ 77.00 and 78.00. As noted above, the D.P.U. will independently propose to rescind 220 C.M.R. §§ 16.00 and 273.00, and to amend 220 C.M.R. §§ 77.00 and 78.00 so that they do not apply to telecommunications common carriers.

A copy of the D.T.C.'s Order and proposed amended regulations may be viewed at the D.T.C.'s Washington Street address listed below. The D.T.C. has also posted a copy of the Order and proposed amended regulations on its website. Documents on the D.T.C.'s website

---

<sup>1</sup> Although Title 220 has been assigned to the D.P.U., several Chapters remain within the regulatory purview of the D.T.C. due to the agencies' joint history. In addition, due to longstanding practice, the D.T.C. relies on the regulations as they are drafted and listed on the D.T.C.'s website, rather than those amended by the D.P.U. (e.g., Chapters 1.00, 2.00, and 5.00). The D.T.C. and the D.P.U. share jurisdiction over Chapter 45.00, which applies to pole attachments.

may be accessed through the D.T.C.'s online File Room and at <http://www.mass.gov/ocabr/government/oca-agencies/dtc-lp/regulation-review.html>.

The D.T.C. will conduct a public hearing to receive comments on its proposed regulation amendments. The hearing will take place at:

Department of Telecommunications and Cable  
Hearing Room 1-E  
1000 Washington Street  
Boston, Massachusetts 02118-6500  
Wednesday, October 19 at 10:00 A.M.

Any person interested in commenting on this matter may appear at the public hearing, or submit written comments to the D.T.C. not later than 5:00 P.M. on Monday, October 31, 2016. In the interest of efficiency, the D.T.C. strongly encourages electronic filing. Interested stakeholders may submit written comments to [dtc.efiling@state.ma.us](mailto:dtc.efiling@state.ma.us). Comments may also be mailed in hard copy to the D.T.C. at:

Sara J. Clark, Secretary  
Department of Telecommunications and Cable  
1000 Washington Street, Suite 820  
Boston, MA 02118-6500

Submittals should reference the docket number, specify the regulation(s) about which comments are being submitted, and should include the name, title, and telephone number of a person to contact in the event of questions about the filing. Please note that all filings submitted to the D.T.C. are subject to disclosure pursuant to G.L. c. 66, § 10, unless protected by statutory exemption. All comments will be posted to the D.T.C.'s website.

Reasonable accommodations for people with disabilities are available upon request. Include a description of the accommodation you will need, including as much detail as you can. Also include a way we can contact you if we need more information. Please allow at least two weeks (14 days) advance notice. Last minute requests will be accepted, but may be impossible to provide. All such requests should be submitted to Sara J. Clark at [sara.clark@state.ma.us](mailto:sara.clark@state.ma.us) or (617) 305-3580.

For questions about this Notice, contact Sara J. Clark, D.T.C. Secretary, at (617) 305-3580 or [sara.clark@state.ma.us](mailto:sara.clark@state.ma.us).
